PROJECTS

Mail Box Client

(24.04.2023 - 29.04.2023)

A simple React app that is able to send and receive mails without using any mail API.

- Integrated react-draft editor for composing new email.
- User can see all the mails they have sent and received.
- Emails can be deleted & can be restored.
- Signup & Signin is implemented with firebase.

Twitter Clone

I have created a Twitter clone using HTML, CSS, and JavaScript, which allows users to fetch and view tweets from the Twitter API

- User Interface: The Twitter clone features a visually appealing and responsive user interface, designed with HTML and styled using CSS.
- Twitter API Integration: Leveraging JavaScript, the application interacts with the Twitter API to fetch real-time tweets. Through API calls, users can access and display the latest tweets on the clone.

E-Commerce App

(09.04.2023 - 14.04.2023)

React app to buy sell products where you can store your all cart related data to firebase.

- Used Google's firebase for user authentication, data storage and hosting.
- Added page protection to prevent any unauthorized access to the page.
- User can add the product to cart and purchase it or remove it from cart.

Expense Tracker

(16.04.2023 - 21.04.2023)

A feature rich React app that help users to keep the track of their expenses.

- Implemented ChartJS library to show expenses visually.
- Integrated firebase for database, authentication & hosting.
- User will be able to retrieve all of his/her data even after a month or year.
- Added download feature which allows premium users to download their expenses in excel format.
